FAST PARTNER PROGRAMME

At FAST we believe that training of partners is not only necessary its essential in order for each partner to be able to deliver their best possible solutions to their customers.

In order to achieve this FAST provides a certified course on each of its specialist product offerings with each participant being able to learn the theory of the product and be able to specify, install and maintain the product fully.

For each company to be able to gain the most out of the certified training it is important that the product demonstration kit is purchased prior to training as this forms an integral part of the initial and ongoing training for each product.

The demonstration kit training is conducted either at the Partner premises or remotely using a virtual training platform depending upon travel restrictions in place at time of purchase.

The FAST KENTEC TAKTIS kit includes a sample range of Hochiki detectors and peripherals that you will learn how to install and programme using the Kentec LOOP EXPLORER 2 Software interface of which a free of charge registration and download is included in the training course. Also included is the VIMPEX Fire Cryer Voice Evacuation sounder complete with Multi Message capability, the Fire Cryer is ideal for all installations where VOICE EVACUATION is specified and offers a cost effective alternative to larger centralised EVAC systems.
